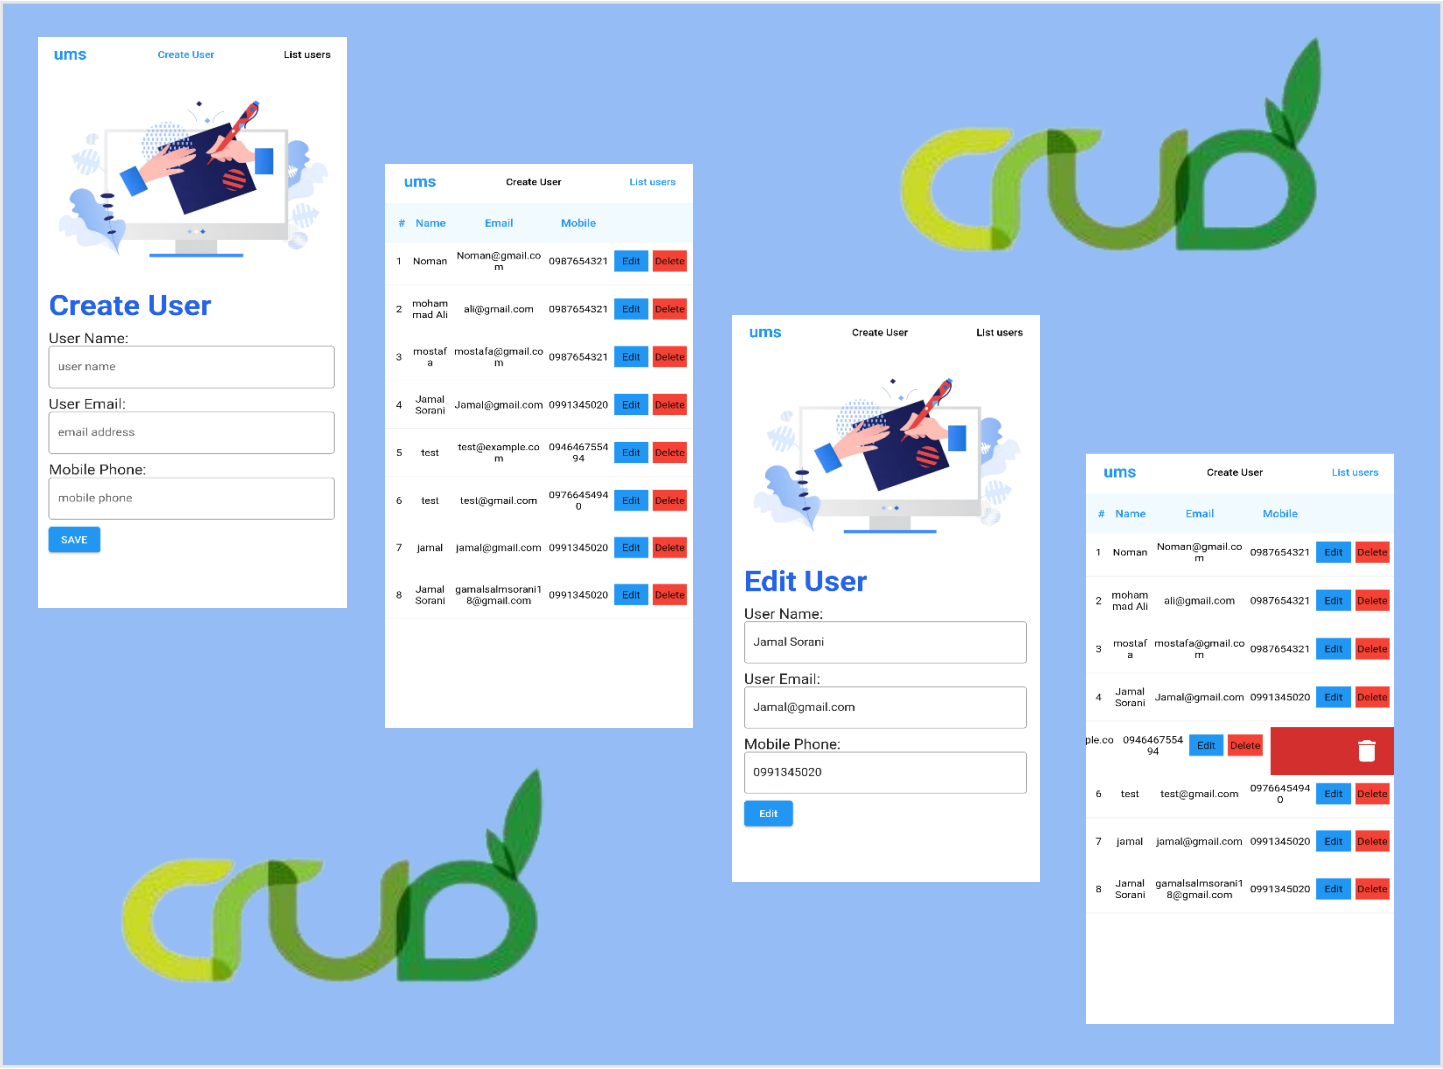
CRUD: Create Read Update Delete

A simple application to entre, view, edit and delete user data and save the results on Firebase.



See the code https://github.com/JamalSorani/crud

Download https://www.mediafire.com/file/9bw4dlwsmtekj9d/crud.apk/file

FARM: the famous children's game

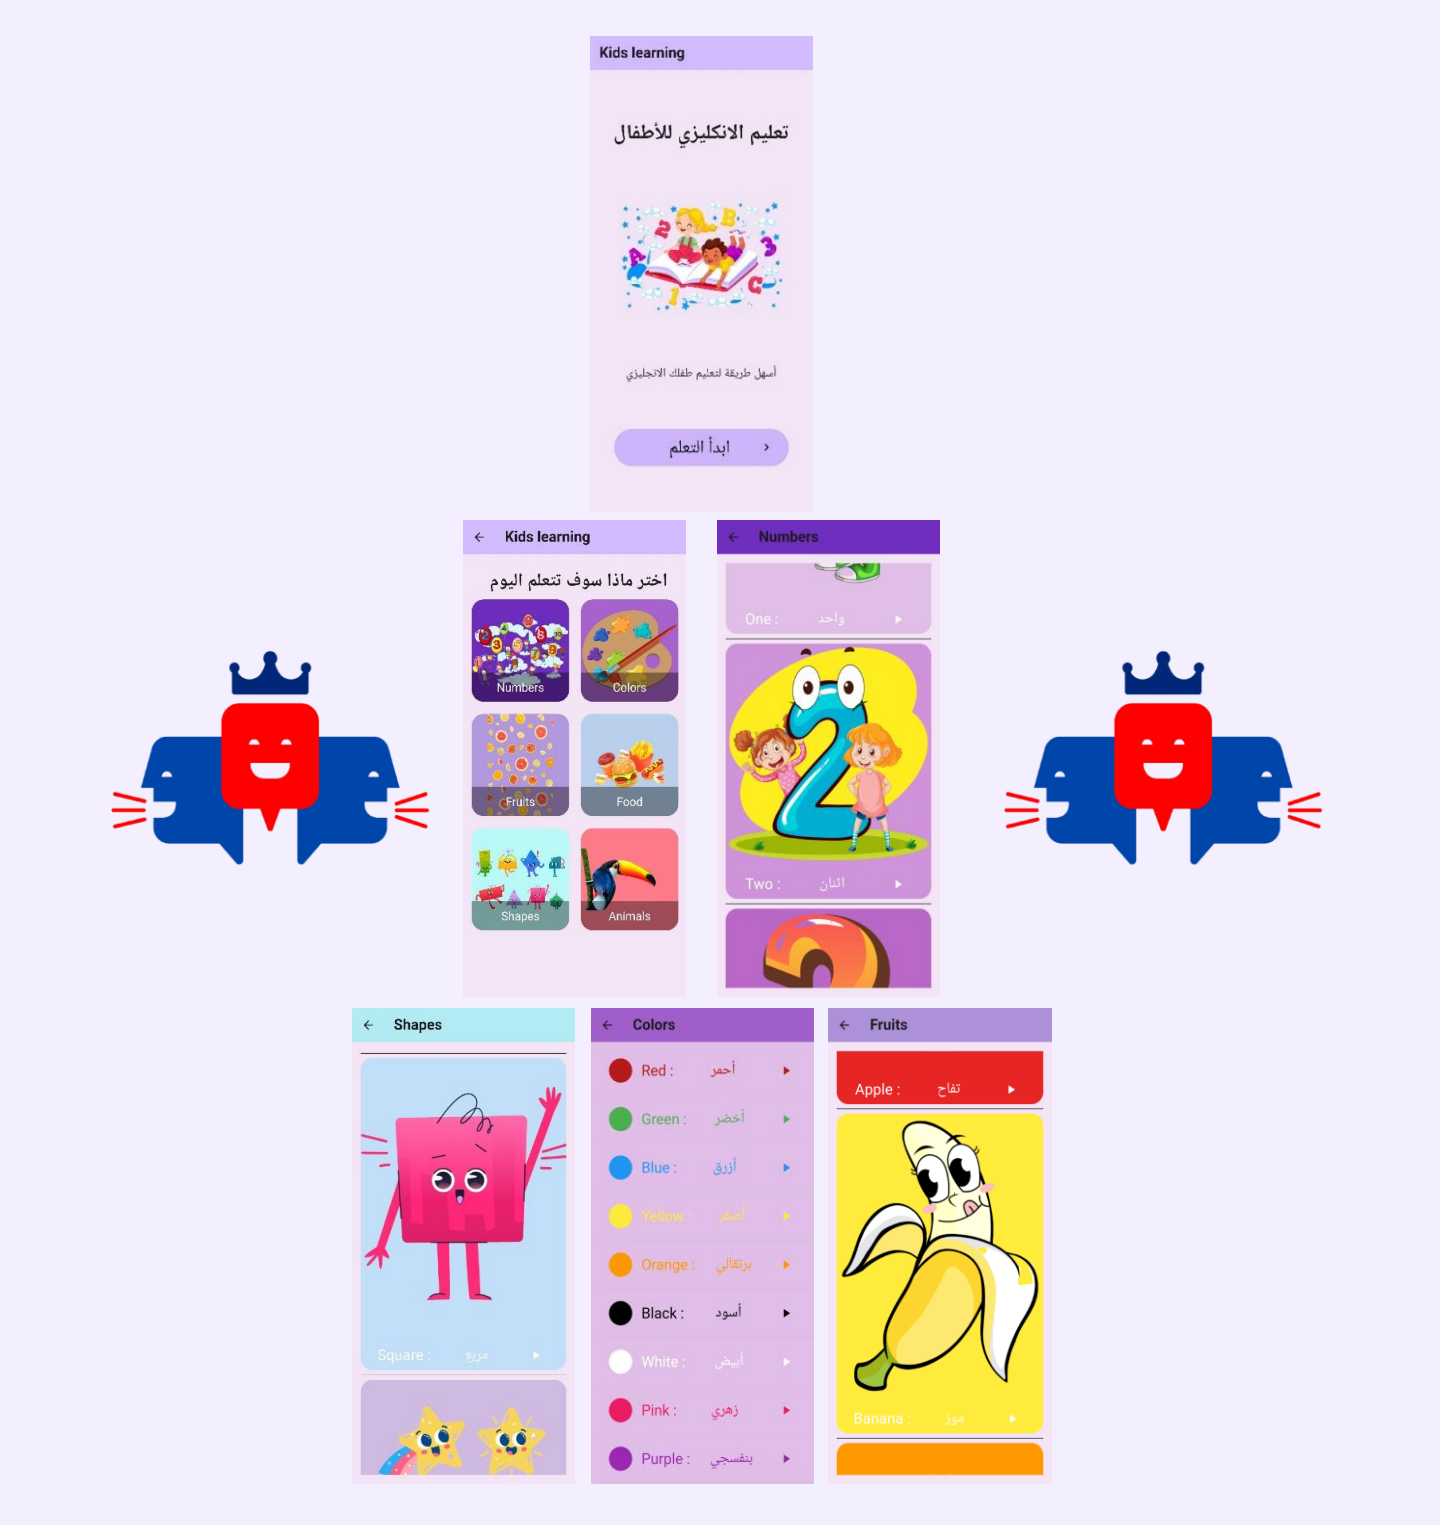
I programmed the famous children's game “Farm” using Dart & Flutter. The game is for one player and one page and does not require Internet.

See the code https://github.com/JamalSorani/farm-game

Download https://www.mediafire.com/file/ivdoygnaw3qbkh4/farm_game.apk/file

KIDS LEARNING:

An application that teaches Arab children's simple words in the English language as a first stage to strengthen their English vocabulary. I used Flutter TTS package to pronounce English vocabulary correctly.



See the code https://github.com/JamalSorani/kids_learning

Download https://www.mediafire.com/file/i4b9yrj5axqwan6/kids_learning.apk/file

DESIGN:

An application that displays ready-made designs to you, and with the click of a button, it gives you the Flutter code that was programmed with it and shows you wonderful colors that you can use. I used the card swiper package to move between pages by dragging.

See the code https://github.com/JamalSorani/designs

Download https://www.mediafire.com/file/ykvn94gpzsl73g6/design.apk/file

SHOP APP:

- An online store where the user logs in, so he can see the existing products, add them to the cart, and order them.
- He can also select the favorite products from them.
- The user can also change the basic color in the application.
- When the user clicks on a product, more details about the product are displayed.
- He can add a new product after the admin approves it, and he can modify and delete his products.
- The administrator can accept or reject users' products, and he can also modify the data of any product and delete any product.
- The navigation between pages is done by Drawer.
- I used Material Color Picker package to enable the user to change the base color in the application.
- There is a button that when pressed changes the status of the product from not preferred to preferred and vice versa.
- I used Enum and Pop Menu Button to display only the user's favorite items when he wishes.
- Many distinctive flutter widgets were also used in this application.
- Authentication was done via rest Api.
- When the user logs in, the user's data is stored in his phone's memory through the shared preferences package, So the next time he opens the application, this data is used and there is no need to log in again until the token expires. If it expires, the app will logging user out automatically and then the user needs to log in again.
- The Realtime database was used as database and all the products and favorite products of each user were stored in it, as well as the orders of each user.

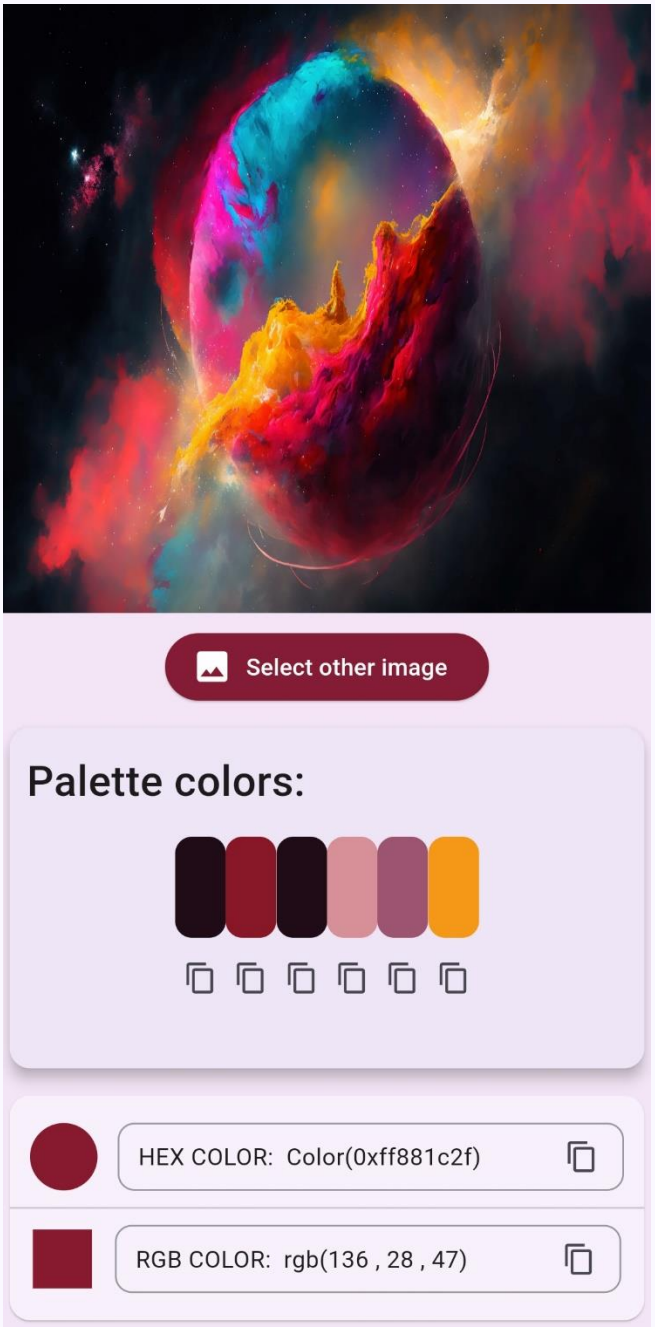
EXTRACT COLORS FROM IMAGE PACKAGE:

There was an old library that was no longer working. I developed it and added more features to it, and it became operational. Using this library, you can know the basic colors codes in an image, and you can also know the color code in any pixel by simply clicking on that pixel. The image you want to add could be file/asset/network image.



See the code https://github.com/JamalSorani/extract-colors-from-image-package
